

# EFFORTLESS RIDE

The high-powered mountain bike for a smooth ride

The German automobile manufacturer Audi holds a famed reputation for its high-end and smoothly-functioning vehicles. One of its newest releases, an electric bike in collaboration with Fantic, is worth all the hype associated with the luxury motor brand. The Audi Electric Mountain Bike Powered by Fantic takes design inspiration from the Dakar Rally-winning Audi RS Q e-Tron which can be driven effortlessly even in the most challenging terrains.

Similarly, this enduro bike is engineered with motors that make it easy for cyclists to ride comfortably both uphill and downhill, thanks to its 180mm suspension mechanism that allows for a pleasant ride. It has a rotational force of 90Nm and a power output that equals 250 watts which is powered by the inbuilt 36-volt lithium-ion Fantic battery pack. Even without putting in any effort, this e-bike can go up to a speed of 25 km/h. When it comes to stopping the bike, regardless of what speed it is being driven, the brakes can be applied precisely with zero struggle due to its INCAS 2.0 braking system.

Its frame, which is complete with a digital screen for keeping track of speed and battery power, is made using an alloy of carbon and aluminium that makes the bicycle light in weight, allowing for flexible electromobility in all instances. Available in three different sizes, this Fantic-powered Audi e-bike is about HK\$76,000 (€8,900).

# EFFICIENT COOKING

The multi-functional steam oven for busy individuals

Compact with its design and multi-functional with its uses, the Miele DGC 7860 HC Pro is an ergonomic kitchen essential that any person who enjoys cooking would appreciate. The combination steam oven is equipped with functions such as rapid heat up which allows for the food to be heated up within a limited time; mix-and-match for preparing different dishes simultaneously with the help of its inbuilt networking feature Miele@home which gives clear instructions on the foods that can be cooked at the same time; and more functions that make the multi-purpose product extremely efficient.

Further raising its bar, the product is embedded with a HydroClean feature that makes the maintenance of the device quite straightforward. It self-cleans the entire oven thoroughly not even leaving the stubbornest of food stains. The Miele DGC 7860 HC Pro manages to do so by combining water with its very own bio-degradable liquid cleaner that was particularly made for cleaning the interiors of the machine.

This concisely built technology-forward oven, which takes up less kitchen space while boasting a multitude of uses, is complete with movement sensors, eco-friendly heating and steaming, and power-saving options that make it sustainable. Priced at HK\$98,000, it is available in the Miele Experience Centre and the brand's online platform.
